

The security handle shroud adds an additional layer of security to your door or gate. The shroud offers protection against gaining forced entry through a method known as 'fishing'. By covering the handle, the shroud resists a wire or similar from being passed to the egress side of a gate or door and attempting to hook the handle and pull it down to retract the bolts (fishing).

Manufactured from 316 stainless steel with a fully enclosed option available, the security handle shroud is an ideal lock accompaniment for environments that are exposed to fishing, such as external gates and louvred doors.

SECURITY HANDLE SHROUD

FEATURES

- Stainless steel finish provides a modern appearance and durability in all environments.
- Covered option encases the handle to protect against tampering.

BENEFITS

- Can be used in conjunction with a range of locking systems including motorised systems.
- Security handle shroud easily retrofitted with fixings that match the existing Surelock McGill handle footprint.
- Ideal solution for gates and louvred doors where handles may be vulnerable to fishing attacks.
